https://github.com/Ornelt2025

Second-year Software Engineering student with a strong foundation in programming, database systems, and analytical problem-solving. Experienced in Java and C through academic projects, with practical exposure to object-oriented programming and SQL-based database design. Motivated to gain hands-on experience in backend development and contribute to real-world software projects. Committed to continuous learning, technical growth, and delivering structured, high-quality solutions.

Education

Maturity Degree, Preca College
2021 – 2024
Korca, Albania

Bachelor in Software Engineering – Year 2, Epoka University
2024 – Present
Tirana, Albania

Technical Skills

Programming Languages (learning stage)
- Java (OOP principles, arrays, loops, exception handling)
- C (fundamentals, structured programming)

Database
- SQL (basic queries, joins, CRUD operations)

Core Concept
- Object-Oriented Programming (OOP)
- Basic Data Structures
- Algorithmic problem-solving
- Database fundamentals (normalization, ER modeling)

Problem-solving & logical thinking
Breaking problems into smaller steps
Thinking about the solution before writing code

Microsoft Office
- Word: writing and formatting documents
- PowerPoint: creating simple presentations
- Excel: basic tables and data organization (others)

Academic Practice

University Coursework 2024 – Present

Solved structured programming exercises focusing on logic development and algorithmic thinking.Applied object-oriented principles in academic assignments.Practiced database design and SQL query implementation.Developed small-scale console-based applications to strengthen programming fundamentals.

Projects

Student Management System (SMS) – Database Project (12/2025)
Designed and implemented a relational database system using DBMS principles. Applied normalization techniques to reduce redundancy and ensure data consistency. Developed SQL queries for managing student records and simulating real-world academic workflows.

Smart Home Automation System – Embedded Systems Project (04/2024)
Modeled a smart home automation system integrating embedded components for lighting, temperature, and security control. Developed system logic and simulations to demonstrate automation workflows and IoT-based control mechanisms.

Languages

Albanian
Native

English
Intermediate

Personal Atributes

Analytical, Problem-solving ability, Reliable and disciplined, Willing to learn, Focused and patient, Team oriented, Fast learner

Certificates

Aptis English Test
British Council (09/2024) Certified advanced-level English proficiency (Score: B2), covering reading, writing, listening, and speaking skills

Hobbies

- Football and team sports
- Outdoor activities and hiking
- Maintaining an active lifestyle
- Reading books
